# Welcome to Epiphan Cloud

Thanks for giving Epiphan Cloud a try!

Epiphan Cloud is a cloud-based device management platform where you can invite remote teams to operate and manage all your Epiphan Pearl systems and LiveScrypt transcription devices from one convenient location. An Internet connection and a free Epiphan Cloud account is all you need to get started.

Access your devices on the Internet 24/7 and be confident that you've got everything under control.

A free account lets you pair as many devices as you need to your Epiphan Cloud team and remotely control each device from anywhere there's an Internet connection. Quickly monitor video sources and access the alerts diagnostic dashboard for remote rescue troubleshooting.

Upgrade to a Pro plan for added features like Pearl system remote login and batch operations.

With any Epiphan Cloud Pro plan, you get:

- Device monitoring and control
- Diagnostic dashboard with real-time health status and alert history
- Choice of customized email alerts
- Remote team access and management
- Grouping devices for easier access and control
- Batch operations to start and stop streaming, recording, and transcription on multiple devices at the same time
- Remote login to your Pearl system and more.

For a comparison of the different plans, see https://www.epiphan.com/cloud/.

For an overview of the Epiphan Cloud interface, see About the interface.

To get started using Epiphan Cloud with your Pearl system, see Get started using Epiphan Cloud with Pearl.

To get started using Epiphan Cloud with LiveScrypt, see [Get started using Epiphan Cloud with LiveScrypt](#).
